How to Order General Purpose Tie-Down Assemblies

COMPLETE PART NUMBERS

Order for Tie-Down Assemblies should include a complete part number which contains the "fixed length" and the "overall length."

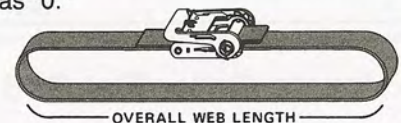

Example of complete part number for a Liftex Tie-Down Assembly:

\*Fixed length strap will be 18" unless otherwise specified.

When ordering Endless Tie-Down Assemblies, specify overall web length and designate the fixed length as "0."

Liftex polyester web tie-down assemblies fill a wide variety of material handling and load restraint needs on transportation equipment, trucks and flat bed trailers. In industrial plants, use them for transporting machinery and as

fixtures for welding or joining applications. In the field they are used by utilities for pole splicing and transporting equipment. All assemblies are made with strong nonabrasive yellow polyester webbing. For a convenient way to

tighten, hold or restrain almost anything, try Liftex tie-down assemblies.

If a standard assembly will not fill your needs, Liftex will work with you to design a "Just right for you" tie-down assembly.
