Climbing is  
exhilarating  
because the  
hazards are so  
real. It matters  
what you do  
up there.

## Building a Better Dynamic Rope

**DryCore Construction.** Your rope stays dry (a safety feature.) 70% of rope is dry due to the fact the fibers we use are dry. Better stretch characteristics.

**EasyClip™ Super Sheath Construction.** Round, firm, super durable ropes. Construction makes clipping and drawing through protection effortless.

**Sterling Bi-Color:** This is a true Bi-Color. We change the color, not the pattern, at the center of the rope. This makes for a more visible change. Each Sterling Bi-Color is custom made. Available in 10.2mm x 50M, 55M and 60M dry, and regular. Again, we have no standard Bi-Color color, but the change is always dramatic.

## marathon™ rope

The Sterling Marathon Rope features the thickest sheath of any dynamic rope on the market making it the most durable. Sterling recognized that some climbers—guides, sport climbers, big wall climbers—are tougher on their ropes than others. We developed a bomber sheath which has 50% heavier denier yarn than our regular dynamic ropes. The Marathon is not bulky, and has a nice supple hand. We tested this rope in the field at selected guiding and climbing schools and gyms throughout the country for two years and believe this is the most durable, all around rope you can buy. The Marathon rope is a 10.6mm, available in any length, standard and dry.

Sterling Dynamic Rope Specifications

	11 mm	10.6 mm Marathon	10.2 mm	10 mm <sup>®</sup> New!	9.7 mm	8.8 mm Half	7.6 mm <sup>®</sup> Twin Ice Thong
